We Care

Why BCARE:

Certified, bespoke solutions delivered anyplace, anytime
Solid Chain of Custody Procedures
Accredited, Trustworthy Labs
With a Global Trusted Network in more than 100 countries
24/7 Response. Proven.
Expertise and Dedication you can count on
Cost effective, Quality Services, tailor made

Ballast and Bilge Water Analysis

With environmental sensitivity, BCARE offers Ballast and/or Bilge Water Sampling and Analysis according to international regulations. We sample and analyze vessels' ballast water on the spot while further analysis as required is conducted in accredited, specialized laboratories always in compliance with the latest regulations, ensuring that the uptake/discharge water meets the requirements set by the US Environmental Protection Agency (EPA) Vessel General Permit (VGP).

Cost Effective Solutions with special offers for the
whole fleet assignment

accurate analytical results
Meet the standards

Urine Drug & Alcohol Testing

The best and most reliable standard for peace of mind.

Mitigate your Risk

Fresh Water Analysis

Safe potable water is essential for your people health and is strictly regulated all over the world.

BCARE's cooperating microbiology, specialized Laboratories analyze water samples with the latest standards, ensuring that the water on board your vessels or in your facilities is of proper and demanded quality.

Consumption of poor quality water can lead to serious illness outbreaks.

Our expertise is at your service

All Seafarers must have access to safe drinking water according to maritime law and relevant ILO Regulations

Your people
health & hygiene is
No 1 priority
Meet the standards

Benzene Exposure Biomonitoring

Our Benzene Exposure Biomonitoring service uses the highly sensitive and specific Liquid chromatography-tandem mass spectrometry (LC-MS/MS) to test for levels of S-phenyl mercapturic acid, S-PMA, a benzene specific metabolite produced when benzene is absorbed in the body.

Regular testing of samples provides valuable feedback on workplace safety as well as enabling an individual's exposure levels to be properly monitored over time.

In the long term even low level exposure to benzene is a high risk

your valuable
assessment tool
